Kumpel Factory

PASCAL KRAHMER
github.com/pkrahmer/kumpel-factory

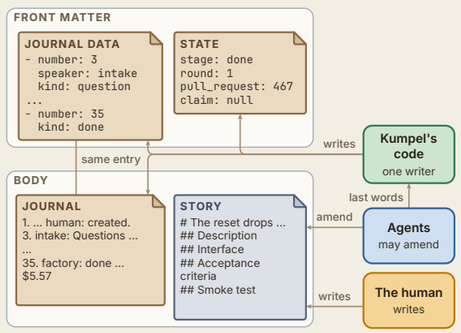

1 The frame and the factory

The human owns every act, even those a session makes.

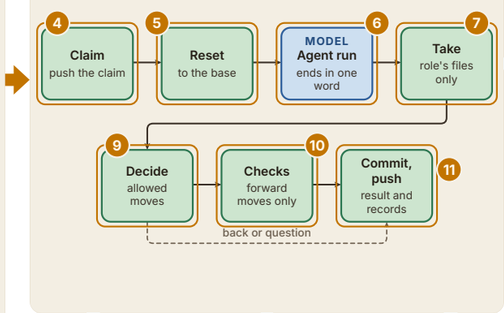

2 A work item

The factory remembers nothing; this file holds what it knows.

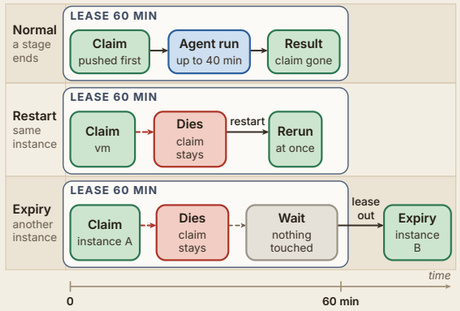

3 One stage

Code takes steps with one right result; a model judges.

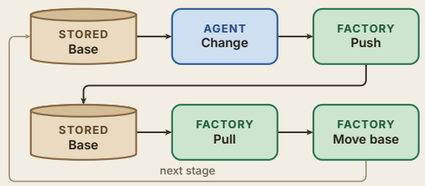

4 Claim and lease

Stops two instances working on one stage; frees it if one dies.

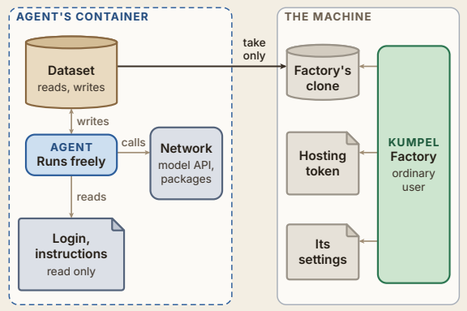

5 The reset cycle

No stage inherits what an earlier agent left behind.

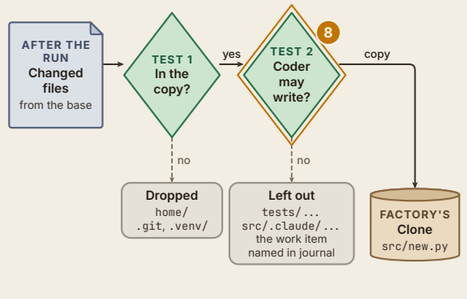

6 Isolation

Agents can print what they reach; the token stays out.

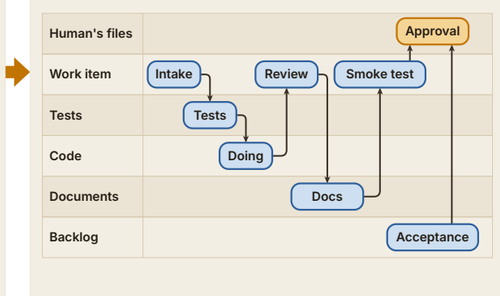

7 The take's filter

An agent writes freely; only its role's files get out.

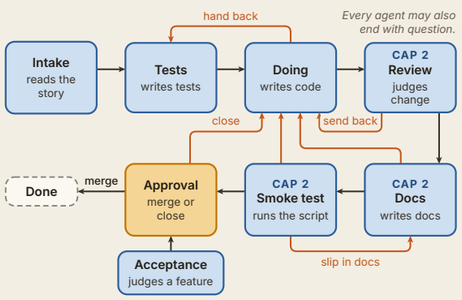

8 Who may write what

The maker never judges: each role writes only its lane.

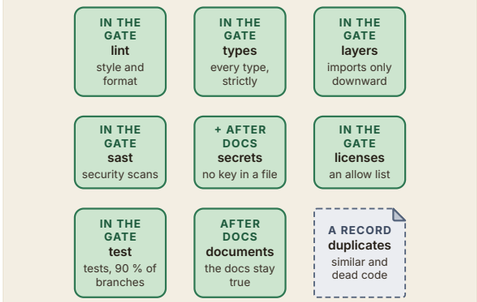

9 The line

Judges send faults back, and a cap calls the human.

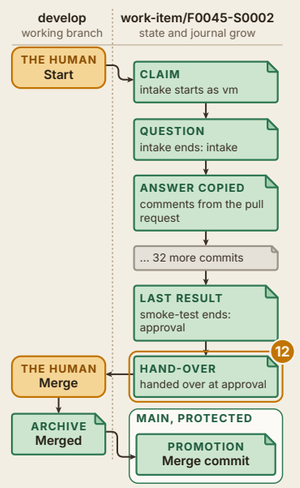

10 The gate

The project defines green; the factory believes only the checks.

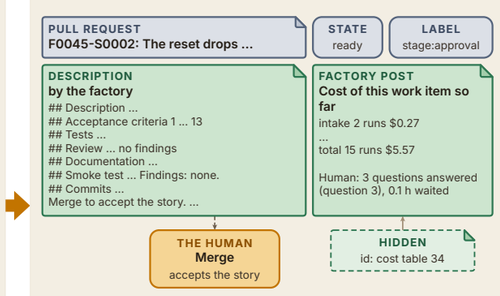

11 Branch, develop and main

Story commits stay on their branch; main takes accepted features.

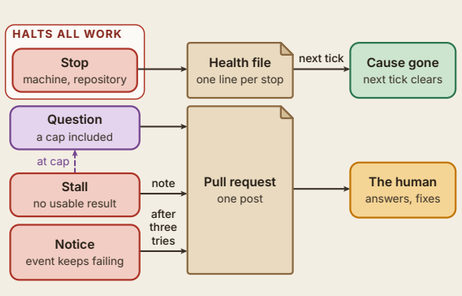

12 The hand-over

The human decides on one page, open in any browser.

13 Four ways work halts

One fault stops everything; a story's trouble stays on its PR.

Key
